

## KSF offers CM series portable lifter for air conditioners installation

Wednesday, 26 March 2008

KSF, a world leader in portable electrical lifters for easy installation, offers the CM series portable lifter, which is ideal for the installation of outdoor and indoor air conditioners. This portable lifter with a 230 V motor features a telescopic mast constructed by heat treated, robust aluminum. It is therefore safe, reliable and compact, making it easy for one person to carry it from job to job...

KSF, a world leader in portable electrical lifters for easy installation, offers the CM series portable lifter, which is ideal for the installation of outdoor and indoor air conditioners.

This portable lifter with a 230 V motor features a telescopic mast constructed by heat treated, robust aluminum. It is therefore safe, reliable and compact, making it easy for one person to carry it from job to job. Also, it offers a set-up without tools: the legs can be released or folded in seconds. The telescopic legs are versatile and infinitely adjustable, available for use in uneven ground, like stairways.

With an electric remote control and a variable speed switch, the variable speed control can have a soft start or adjust through micro height operation. It includes an emergency stop button, is designed to be manually operated in case of power failure and is equipped to prevent over weight loading. According to the company's press release, its special design makes the platform ideal for the installation of window-type air conditioners and allows users to work close to the wall. It is available in 3,3 m to 4,9 m lifting heights.
